

Atomy Saw Palmetto

Atomy Saw Palmetto for Men's Health

As men reach their 40s, the symptoms of prostate problems can be found and men who are older have a higher chance of developing the symptoms. This is associated with an enlarged prostate due to hormones.

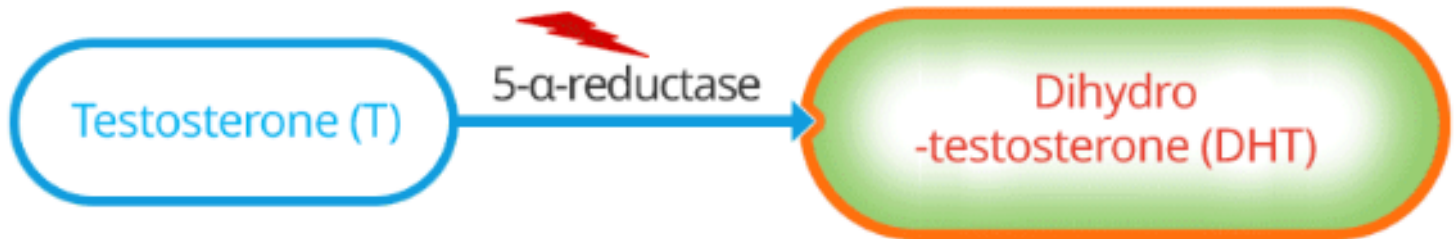

Recently it has also emerged as a serious problem among younger generations because of their daily lifestyles like sitting all day long, driving for long hours, work stress, drinking, smoking, and meat consumption.

Therefore it is important to keep prostate function healthy before any symptoms develop.

What is Saw Palmetto?

Saw palmetto or *Serenoa repens* is a palm tree native to the southeast regions of North America and especially abundant in Florida. The fruit was used by Native Americans for its nutritional properties and to improve male urinary problems.

Saw Palmetto Mechanism

Saw palmetto may slow down 5-alpha reductase, an enzyme that converts testosterone into dihydrotestosterone. By slowing down 5-alpha-reductase, saw palmetto may reduce prostate enlargement. †

Self-assessment Test

- You have a sensation that your bladder was not completely empty after you finished urinating.
- You have to urinate twice or more within 2 hours.
- Urine stream stops and starts several times during urination.
- It is difficult to postpone urination.
- You have to push or strain to start the flow of urine.

Prostate?

The prostate is a walnut-sized gland located between the bladder and the male genital organ.

It surrounds the urethra and urinary bladder and it secretes the prostatic fluid which is one of the components of semen. The prostatic fluid also protects sperm.

Why is prostate health important?

Prostate can cause medical problems including prostate cancer, enlarged prostate, and prostatitis. Prostate cancer is a common cancer in males. Enlarged prostate affects almost all men aged 40 and over. This problem makes it difficult to urinate. Prostatitis is an inflammation caused by an infection.

Self-assessment Test

- Frequent or urgent need to urinate
- Slow or weak urine streams
- Frequent urination at night
- Difficulty urinating
- Dribbling of urine
- Inability to completely empty the bladder
